U.R. No. \_\_\_\_

Surname \_\_\_\_

Given Names \_\_\_\_\_

D.O.B. \_\_\_\_\_

## **INSTRUCTIONS:**

Timing of the change of position is dependent upon the overall condition of the patient, pressure equipment resources in use and is determined by checking the status of the skin at each position change. In the presence of **persistent redness**, decrease the time intervals between position changes and/or reevaluate pressure equipment in use.

At each change, describe the status of skin over bony prominences that were lying on the bed and note any action taken to reduce the likelihood of pressure ulcer development.
